

**University of Washington**  
*Bioengineering Genomic Sciences Building*  
Seattle, Washington

**DESCRIPTION** The University of Washington recognized the important achievements of the Department of Bioengineering, and of the department's need for consolidation. As a result, the University consolidated and expanded its graduate and undergraduate population in a new 150M state-of-the-art teaching and research facility of approximately 145,760 gsf with 75,970 asf (assignable square feet). The building site is located at the southeast corner of the intersection of Northeast Pacific Street and 15th Avenue Northeast. The Architect for this project was Anshen + Allen, Los Angeles, CA. The University of Washington's Department of Genomics offers a multi disciplinary program of collaborative research and training designed to rapidly advance our understanding of genetics and the practical application of new research techniques. The new building is 127,000gsf state-of-the art research and teaching facility. Also included in the program was an underground loading facility shared with Bioengineering, a 150 seat auditorium and a cafe.

**SERVICES** Construction Management

**BUDGET** \$ 150 Million

**FINAL COST** \$150 Million
